Experience

Casey Prevette – My Site

2009 - Current

(www.caseyprevette.com)

My own site built as a project in my HTML/CSS class. This is where my resume and portfolio are hosted. I plan on keeping this site updated as my personal skills and preferences change. I will be adding new projects to my portfolio as they are completed.

Tomlin Mill One Stop – Web Design/Maintenance

2008 - Current

(704) 876-4440 – Owner Karen Schulz

(www.tomlinmillionestop.net)

Originally a basic site made before going to UNC Greensboro, now I have redesigned this site to be much more sleek and informative without so much clutter. I incorporated everything the owner requested without letting the information become overwhelming. This site includes an interactive Google Maps window for easy access to driving directions, as well as simple text directions for people browsing on a phone or other small mobile device.

Art Educator – Web Design/Maintenance

2006 - Current

(www.Muncyism.tripod.com)

Amanda Muncy's Art site used to showcase her work, and to assist in her professional job hunt. Originally built using Tripod site builder but recently redesigned using HTML/CSS learned in courses taken at UNCG. The artist is interested in a Flash based site, so I may be rebuilding this site with a more glossy Flash interface in the place of the current HTML/CSS.

Education

University of North Carolina at Greensboro

August 2008 - June 2010

I graduated from UNCG in June 2010 with a B.F.A. in Design. My first year I acquired a knowledge of basic design and color theory as well as physical three-dimensional design and intermediate drawing skills. My second year I focused on digital design, including web, digital 3-d, and animation of two and three-dimensional environments.

Mitchell Community College (Statesville NC)

August 2006 - May 2008

While at Mitchell I focused on general education requirements as well as art classes. I took a few computer classes for electives because I enjoy working with computers. I was taught beginner level Visual Basic. I took a web design class, but was unable to complete it due to lack of funds for Adobe Dreamweaver software.

Skills

In my courses I have learned HTML, CSS, and web standards with a specialization in understanding visualization on the web. During my last semester I focused on working with Flash based interactive web design elements. I love computers and I'm passionate about working with them. I have taken two levels of photography (both digital) in anticipation for needing to shoot products for a future client's web site. In regards to animation, my instructors have covered both 3D and 2D animating. I have had training with the Adobe Create Suite, Cinema 4D, and BBEedit. I feel very confident in my web design abilities and design skills in general.
